

AIRTECH CLEANER

The AirTech Cleaner cleaning system is designed for aeration systems. It consists of a trolley, ultrasonic nozzle, dosing pump and compressor. The ultrasonic nozzle produces a fine mist to clean diffuser membranes without the need to empty or remove them. The DMX series dosing pump is characterised by its efficiency and adjustability.

KEY SPECIFICATIONS OF THE AIRTECH CLEANER INCLUDE

Maximum working pressure: 10 bar
Pump body: PVC
Ball valve: Glass
Seal: FKM
Pump delivery: 6 / 12 mm hose

The AirTech Cleaner is recommended for use with acetic, formic or orthophosphoric acid. Regular cleaning will reduce load losses and energy consumption associated with oxidative processes. Contact WTE for guidelines on dealing with increased load losses and the need for immediate cleaning intervention to maintain optimum operating conditions.
